Dear SAP CSAI Team,

I am writing to apply for the Working Student AI Developer position. I am a Data Science student at Tecnológico de Monterrey, and this posting stood out immediately: Claude Code, named directly among the tools this role works with, is a tool I already use every day to research, prototype, and ship automation solutions.

My recent work is a close match to what this role asks for:

- AI-assisted automation design: At Deutsche Bundesbank, I used Claude Code to help design and build an automated validation framework, converting a manual, case-by-case script into a parameterized, configuration-driven solution, while owning every design decision myself.
- Prototyping end-to-end: In a personal banking-data project, I used Claude Code throughout to accelerate implementation of a database schema, cleaning logic, and trigger-based automation, then iterated based on my own review of the output.
- Practical scripting and tooling: Comfortable with Python, SQL, GitHub-based collaboration, and translating a stated requirement into a working prototype quickly.

I am fluent in English, with German at a professional working level (C1), and I am available as a working student alongside the final stretch of my degree (expected 01/2027).

I would welcome the opportunity to discuss how I can contribute to the CSAI team.

Kind regards,

Ana Lorena Ortiz Loyola
